

The Tim Hortons / Starbucks gas can

New or used coffee box

Remove Mylar bag

Rinse coffee residue from the bag and let it dry.

You have a great emergency gas can 😊

This bag will hold approx 1 gal of gasoline.

Leaded , non-leaded

The bag is awkward to hold unless you use a back pack (etc.)

Note:

The Mylar bag is similar to a PVC gas can, it will not carry a +++ static charge

Triboelectric Series

The process of electron transfer as a result of two objects coming into contact with each other and then separating is known as 'triboelectric charging'. The prefix 'tribo' means 'to rub.' The process of triboelectric charging results in one object gaining electrons on its surface, and therefore becoming negatively charged, and another object losing electrons from its surface, and therefore becoming positively charged.
